

Turpentine in Florida

Past, Present, Future?

In 1913 Florida led the nation in turpentine production, and the industry had a tremendous impact on the economy, ecology, and culture of the state. Since the 1950s the industry has evolved, but not disappeared – the use of pine-derived chemicals is still a major industry across the Southeast. New methods and technologies have the potential to continue to evolve the industry, and create opportunities for landowners

The Association of Consulting Foresters, University of Florida, and Society of American Foresters are pleased to host a program on this important part of Florida's past, present, and future.

10am-3pm – Friday October 13, 2017 at the AUSTIN CARY FOREST

History of Turpentine in the South

Bill Consoletti

Reflections by Three Florida Turpentine Families

Avery Roberts, Bubba Green, and Jim Tilton

The Pine Chemicals Industry: Today and the Future?

Dr. Alan Hodges

Tour of the A. Chester Skinner Jr Turpentine Education Site

Wayne Smith and Scott Sager

Catered lunch provided. Six CFEs will be available. Space for chapter meetings available before, during lunch, and/or after.

Cost is \$15 at the door. Register at <https://tinyurl.com/y9u2d9ze>.
